Election/Restrictions

This application contains claims directed to the following patentably distinct compositions of the claimed invention: isolated toxins and methods of use of such from each of *B.t.* strains PS17, PS33F2, PS52A1, PS63B and PS69D1. Specific protein isolates recited are SEQ ID NO:2, 4, 6, 10, 12 and 20-23. It is not clear at this time whether SEQ ID 20-23 are subsequences of any of SEQ ID NO:2, 4, 6, 10, or 12.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed toxin species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. Any identified subsequences will be searched along with the full toxin sequence. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

If claims are added after the election, applicant must indicate which are readable upon the elected isolate. MPEP § 809.02(a).

This IS NOT to be construed as a species election, as the isolates yield different compounds with different, unrelated primary structures that appear to be patentably distinct.

Should applicant traverse on the ground that these isolates are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
